Project Status report

Name:	Krupal Patel
Community (UN SD goal):	#3: Ensure healthy lives and promote well-being for all at all ages
MVP #	1
Sprint cycle dates:	24th October 2021 - 30th October 2021

Project Name	HealthHack
Blurb	This application will guide the user through their living habits. Upon calculating BMI, the user will be prompted to get options on what they want to peruse. They will be presented by the Fact, Exercise, and meal of the day. This will support the UN SD goal of healthy living.
For Week Ending	11/01/2021
Project Status	Yellow
Status Description	• The project is presented in a yellow stage as the I am still researching on web scrapping and incorporating it into my project to produce results. • I will have to reschedule my daily routine and get back on track by finishing learning/implementing web scrapping to get back on track.

Activities—During the past sprint cycle

- BMI Calculator was made.
- Research on web scrapping is under process.

Project Issues

Incorporation of web scrapping component might be difficult considering the timeline.

Project Changes

Currently the project is going as planned.

Activities—Planned for Next Week

Find meals from legitimate sources.
Create individual food items suggestions.

Reflection

- I currently feel on track
- I have started the application and it is looking how I wanted it to be.
- Will have to figure out a way to add web scrapping content to the application for the Fact, Exercise, and meal of the day.
- I will require help to ensure the content produced with web scrapping is legitimate, how to add content in my application.
