Project Status report

Name:	Krupal Patel
Community (UN SD goal):	#3: Ensure healthy lives and promote well-being for all at all ages
MVP #	2
Sprint cycle dates:	1st November 2021 to 16th November 2021

Project Name	HealthHack
Blurb	This application will guide the user through their living habits. This application will guide the user through their living habits. Instead of concentrating on BMI I will be giving equal importance to user profile/progress. Also, the meals and exercises provided.
For Week Ending	16th November 2021
Project Status	Yellow-Green
Status Description	My project is in the state given above as I am currently in progress of finalizing user profile, description of my meals and tracking the progress. I have already coded BMI calculator in MVP 1 which just has to be linked to my application.

Activities—During the past sprint cycle

- Meal cards were made.
- Exercise layout was made.
- Project goal refined.

Project Issues

I had issues linking information through web scrapping in my project. So currently I am providing meal options process by review of a nutritionist.

Project Changes

The project focus will be shifting from BMI calculator to a option which provides the user to calculate their BMI.
The application will present exercises, meal plans to the user. With the functionality of keeping track of progress.

Activities—Planned for Next Week

Next week
- Link MVP1 and MVP2
- Code user profile, progress chart.
- Add meal information.

Reflection

- I feel that my shifting the focus from BMI calculator has opened ideas for user progress tracking. Also trying to implement progress bars and food intake calories.

- The screen resolution for my application is not highly responsive.
- Will require to spend more time on getting main things working on the app rather than making it look good.
- So far everything is going according to what I thought so that's good.
